

Sydney IVF

Project Description

As Australia's leading centre for infertility and IVF treatment, Sydney IVF planned a strategic relocation to a newly refurbished office tower in Sydney's CBD. Offering pioneering science and personal, professional care and support, Sydney IVF assure their clients of a comfortable and stress-free experience.

This 4,500sqm fitout incorporated some of the latest specialist medical facilities and services available. Along with administration offices and meeting rooms were numerous doctors' consultation rooms, procedure rooms, general theatres, scrub areas, recovery bays, collection rooms, research facilities, DNA rooms, scanning rooms, andrology and embryology rooms, cryogenic storage and instrument cleaning facilities. Furthermore, sophisticated air handling solutions were required in various parts of the fitout.

The project had to meet stringent guidelines and technical specifications, as well as being completed in a very challenging timeframe. Operational continuity was critical to the client, as was reaching critical dates for the physical relocation.
