FDC recently completed the two-stage fitout of BAE Systems Australia, at 80 Flinders Street, Adelaide.

FDC recently completed the two stage fitout of BAE Systems Australia, over the Ground Floor and Levels 3 and 5 at 80 Flinders Street, Adelaide. BAE Systems is a defence and security company, providing design, manufacture, upgrade and support services to the Australian Defence Force and cyber intelligence and commercial organisations across Australia.

The sophisticated fitout included all new services, AV and security, partitions, ceilings, tiling, painting and vinyl and carpet tile flooring. Some notable features include the kitchen, which has laminate with matching ABS edging, terrazzo splashback tiling and Caesarstone benchtops, and the custom-made lockers with planter inserts.

The end result is a stylish workplace which feels fresh and vibrant from the abundant use of plants throughout. The plywood veneer curved panelling adds a high-end look, balanced by the colourful accents used in the furnishings and breakout areas.
